REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

As stated in previous office action:

Claim 1 includes the limitation of a turning mechanism in the body having a portion movable to force the tool to turn and reposition the tool about the turning axis. An actuator is movable to a first position to actuate the portion of the turning mechanism to force the tool to turn about the turning axis and movable to a second position to actuate the retention device for releasing the tool from the body.

Claims 3, 6, 16 and 31 teach a push button on the actuator, which is capable of being pushed with light pressure to turn the tool through a predetermined increment of turning, and capable of being pushed with greater pressure to cause a release of the tool from the body.

Claim 12 teaches a tool device comprising a retention member pivotally mounted within in the body, a turning mechanism on the tool device operable for engaging the tool and turning the tool through a predetermined increment and further an actuator for shifting the retention member to a tool release position to release the tool from the tool device.

Claim 27 teaches an actuator on the tool device with a first movement to turn the tool automatically through a predetermined increment about the turning axis. There is additionally an actuator on the handle to eject the tool with force from the tool device.

Bray ('175), Cinotti ('271) and Keegan ('498) fail to teach all the elements of the claimed invention nor would it have been obvious to modify the prior art to achieve the claimed invention since there is a lack of motivation to do so.
